

COMBAT CORONAVIRUS (AND OTHER HARMFUL PATHOGENS)

SAFE-SHIELD SANITIZATION SERVICE

The Covid-19 pandemic has prompted us to expand our sanitization services to help our clients prepare their workplace for the safe return of employees and clients. The length of time viruses can survive on surfaces varies greatly by pathogen. We offer one-time or ongoing sanitization services to help you eliminate health concerns.

The Safe-Shield Sanitization Service utilizes our Commercial Electrostatic Sprayers to distribute a patented silica based solution into a fine mist at 40 microns. This method is proven to eradicate and remove pathogens from all surfaces. In conjunction with this service you will receive a report with before and after ATP test results detailing the sanitization effectiveness.

The Success is in the Science: the active ingredient maintains a high pH which is hostile to microbes and viruses after it has been sprayed.

Protect all surfaces in your workplace with the Safe-Shield Sanitization: our process treats all surfaces safely and confidently. We hand wipe high touch surfaces that have the potential to cause transfer and exposure of harmful pathogens leaving your workspace completely sanitized.

Schedule your floor to ceiling services today! We provide free quotes!
